QA Automation Lead | Automation Architect

Dubai, United Arab Emirates

Dear Hiring Manager,

Some people break things for a living. I prefer building the systems that **break early, catch fast**, and keep everyone else moving forward.

Twelve years ago, I set out to shift quality assurance from being just a routine checkpoint into a **strategic engineering function**, one that supports **product integrity, release velocity**, and overall user confidence. Since then, I've built **automation frameworks** that do more than just catch bugs. They scale, evolve, and quietly power **modern delivery pipelines** across a wide range of product environments.

I've worked across both startups and enterprise teams, designing test systems that bring mobile, web, API, and performance testing into **unified, maintainable pipelines** built for CI/CD. From Playwright and Flutter Patrol to K6 and Cypress, I focus on using the right tools in the right context. More importantly, I build systems with **reliability** and **long-term clarity** at their core.

My goal is always the same: **build smarter frameworks**, cut the noise, and make quality a natural part of the development process. I've developed **data-aware UI validators** that catch mismatches before a bug report is written, led **deep-link testing architectures** to improve mobile coverage, and replaced scattered legacy scripts with **clean, observable, and scalable** automation solutions.

Beyond hands-on testing, I **contribute to the QA community** by **mentoring engineers** through ADPList, speaking at industry events, and maintaining **open-source tools**. I care about sharing knowledge, building clean systems, and simplifying complex QA challenges into patterns teams can rely on.

If you're building a team that treats quality as a **core engineering discipline**, not an afterthought, I'd love to connect.

Best,
Ahmad Waqar
